750+

team size

18

duration in months

Business Challenge

- Software upgrading and applications deployment was performed manually during night shifts. Our client faced many limitations and incurring extra expenses.
- Constant miscommunication between developers and operational team led to missing deadlines, impacting the risk losing the customer.

Solution

- Integrating various automation tools/techniques, we managed to build a software update procedures which reduced the delivery time and minimized errors.
- Using DevOps practices we allowed operations to understand and be in sync with the development teams.

The Result

A prototype of a secure data storage system has been developed to ensure that all formalities are settled automatically and all parties involved in the treatment process have access to the information they need, effectively minimizing the wait time for patients. The solution has potential for use in healthcare insurance and other industries that use personal data and require quick decision making.
