

WaveAccess
We Make IT Easy

Healthcare insurance blockchain integration for a major US pharmaceutical company

About

WaveAccess is a results focused software development company that provides high quality software outsourcing services to hundreds of emerging and established companies globally. We use our technical expertise to increase business efficiencies, optimize slow or unreliable systems, recover projects that have gone off track and bring ambitious ideas to life.

22

years of delivering successful outcomes for customers

800+

talented and passionate professionals

8

R&D centers and regional offices

17+

industry verticals from banking to healthcare

500+

successful projects delivered and counting

96%

customer satisfaction index

Awards and Recognitions

Core Competencies

Implementation of highly loaded and highly scalable systems

Workflow and business process automation

Development of Real Time Monitoring Systems

Microsoft Dynamics CRM development, customization and implementation

Blockchain implementation

Web and Mobile applications development

Building ETL and BI Systems

Project recovery

Building AI and Machine Learning based systems

System Integration and optimization

Data import and migration

IoT project development

Project Overview

Users

10+ companies
(per each US state)

Team Size

2 members

Duration

1 months

Business Challenge

The challenge was to save time and costs by settling formalities automatically, eliminating paperwork and human factor wherever possible in the whole process.

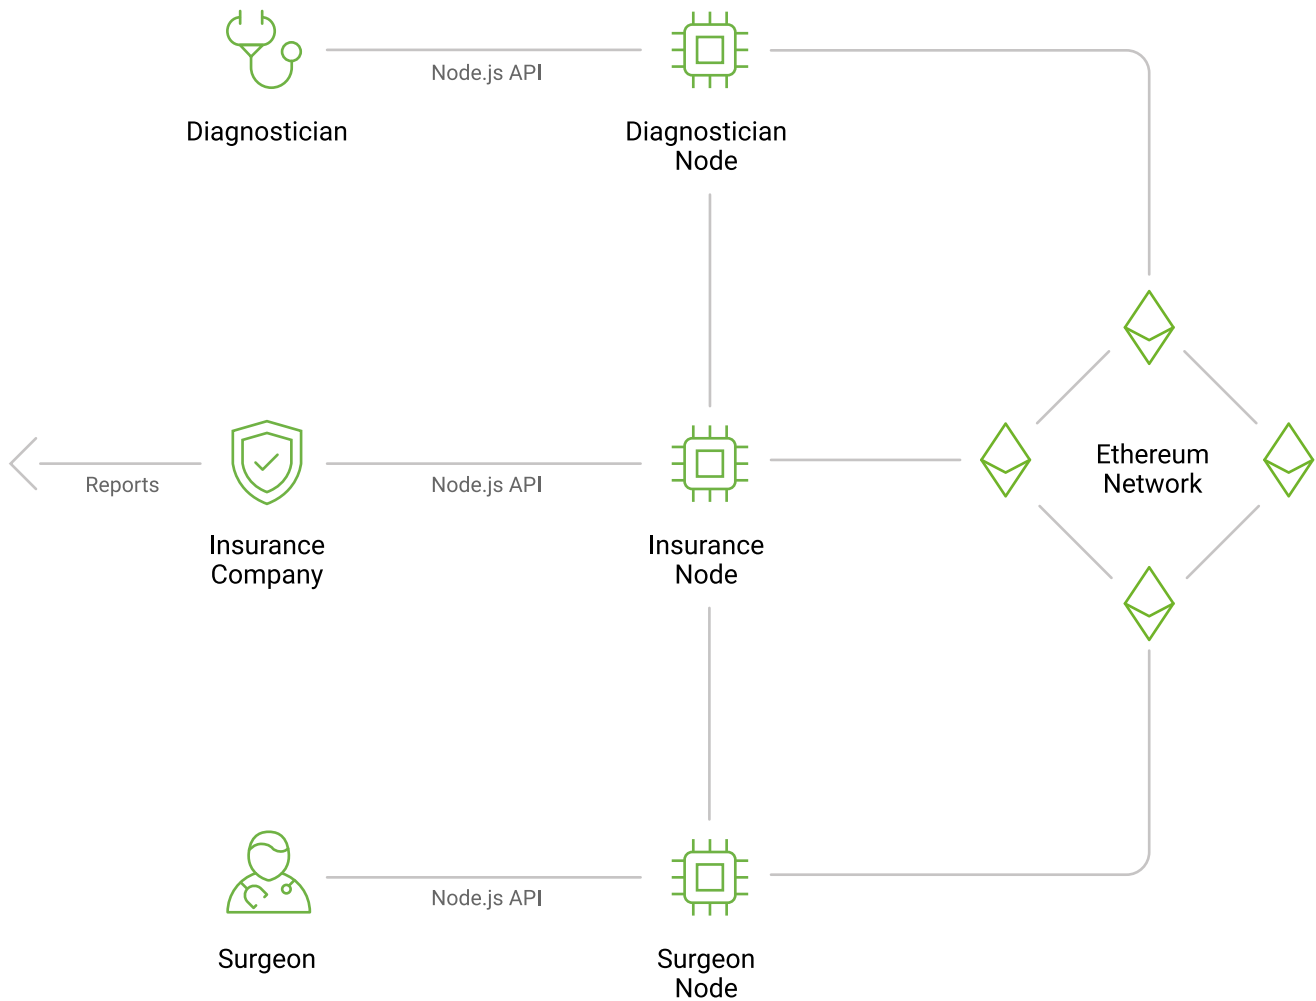

For patients with severe conditions, it is often a matter of life and death to get a timely treatment or surgery. In most cases, these medical procedures are also very costly, and the expenses may or may not be covered by the patient's insurance plan. It takes time for a healthcare provider to coordinate all expenses with an insurance company, and to deliver the patient's healthcare record from a diagnostician to a surgeon in a different clinic – and there is a lot of paperwork and human factor involved.

Solution and Technologies

- A private blockchain platform was deployed on Monax.io (ex-ERIS) to store data and process business rules.
- A REST API server on NodeJS to facilitate the connection of third-party applications (“oracles”) to the blockchain was deployed.
- A number of auxiliary utilities for blockchain testing and development was implemented.
- Smart Contracts for document flow among partners (transition from instance to authority) of health insurance cases were developed.
- Load testing for the TTX blockchain was developed and implemented, taking into account hundreds of thousands of transactions.

Architecture

The Result

A prototype of a secure data storage system has been developed to ensure that all formalities are settled automatically and all parties involved in the treatment process have access to the information they need, effectively minimizing the wait time for patients. The solution has potential for use in healthcare insurance and other industries that use personal data and require quick decision making.
